COURSE SYLLABUS

Course information (basic description, general information, teaching overview, required equipment, and preparation, etc.):

The **main aim of this course** is to enable students to apply the previously acquired knowledge from all subjects of the first two years of study, especially from the course of Physiology, in order to acquire knowledge about pathological function of certain organ systems and etiopathogenetic mechanisms leading to dysfunction and disease occurrence.

The course is performed in the winter semester at the third year of study, in the form of lectures (45 teaching hours), seminars (60 teaching hours), and practicals (30 teaching hours). Lectures last 2, and seminars and practicals 3 teaching hours. **A) Lectures** are a form of classes that provide an introduction and an overview of a thematic unit that is taught in more detail on seminars and practicals. **B) Seminars** and **C) practicals** are a form of classes where students actively **review** and **critically discuss** physiological and pathophysiological mechanisms (of certain morphological and functional units), which are then explained at the molecular, microenvironmental, organic, systemic and whole-organism level. Active participation of students in the curriculum program is further achieved by **D)** studying natural integrators of etiopathogenetic events, the so-called etiopathogenetic clusters, **E)** performing practicals in the laboratory and on computer programs that simulate pathological conditions and provide clinical correlates of certain diseases

Class attendance and student participation in all forms of classes are compulsory in accordance with the Law and the Statute of the Faculty of Medicine in Mostar. Accordingly, student attendance at lectures, seminars, and practicals will be regularly checked. Only justifiable absences due to, for example, illness will be acceptable within the limits allowed and according to the Ordinance on Studies.

The student is obligated to prepare in advance the predefined material that is being discussed on seminars and practicals. The teacher/course coordinator continuously evaluates student participation throughout seminars and practicals (demonstrated knowledge, the ability to correlate morphological, ultrastructural, biochemical and/or functional factors into a complete image of physiological functional systems and certain diseased states). Student activity during classes (lectures, seminars, practicals) is certified in the daily work log

Exam (exam taking, detailed exam description of the oral/written/practical part, point distribution, grading criteria):

Student work will be evaluated during classes and at the final exam. A maximum of **(I) 30 grade points** can be obtained during classes and up to **(II) 70 grade points** at the final exam, which totals **100 grade points**.

I. The following components are evaluated during classes (up to 30 grade points):

1) acquired knowledge **(up to 20 grade points)**

2) active participation in classes **(up to 10 grade points)**

1) acquired knowledge (up to 20 grade points)

During classes, acquired knowledge will be evaluated by means of **two midterm tests comprising 50 questions**. Test will be held on:

(I) 12. january 2024. from 13,30 to 14,30 hours

(II) 26. January 2024. from 13,00 do 14,00 hours

A student may obtain up to **10 grade points** on each test as follows:

Correct answers	Grade points
48-50	10
45-47	9
42-44	8
39-41	7
36-38	6
33-35	5
30-32	4
27-29	3
24-26	2
21-23	1

2) active participation in classes (up to 10 grade points)

Based on oral discussions and/or written tests, student knowledge is graded at all seminar and practical classes. A student can obtain grade points during classes only if they were **graded** at least on 10 seminars and 5 practicals. Students will be graded in the range from 1 to 5. The score scale is determined according to the absolute distribution of mean values of grades, which is achieved by summing all grades from seminars and exercises (a total of 30 teaching units) and dividing by number 30 (or less if the student was justifiably absent or not graded). The obtained average grade is converted into grade points as shown in the table:

4,26-5,0	10 points
3,76-4,25	8 points
3,26-3,75	6 points
2,76-3,25	4 points
2,00-2,75	2 points

II. Final exam (up to 70 grade points):

The final exam consists of an oral and a written part. A student must solve **at least 50% of the test** in order to access the oral part of the final exam.

Who can NOT access the final exam:

Students who missed 30% or more teaching hours. Such a student cannot take the final exam, i.e. he/she must re-enroll the course in the following academic years.

Student can obtain a maximum of 70 grade points at the written part of the final exam (100 questions) that corresponds to the total number of grade points as shown in the table:

Correct answers	Grade points		Correct answers	Grade points
97-100	70		68-69	57
94-96	69		66-67	56
91-93	68		64-65	54
88-90	67		62-63	52
86-87	66		60-61	50
84-85	65		58-59	48
82-83	64		56-57	46
80-81	63		54-55	44
78-79	62		52-53	42
76-77	61		50-51	40
74-75	60		<50	0
72-73	59			
70-71	58			

III. The final grade (a maximum of 100 grade points)

The final grade represents the sum of all grade points obtained during classes and at the final exam. It is based on the absolute distribution according to the following scale:

A (80-100 grade points)	excellent (5)
B (70-79,99 grade points)	very good (4)
C (60-69,99 grade points)	good (3)
D (40-59,99 grade points)	sufficient (2)
F (student who has solved less than 50% of the test at the final exam)	insufficient (1)

IV. The final grade obtained on the written test has to be confirmed at the oral exam

05.07.2024.
19.07.2024.
06.09.2024.
