phone number:					
The aims of the course:	causes,	ride the undergraduat clinical presentation, mote positive attitude	diagnostics ar	nd treating internal di	seases.
	commu	nication with patients	, colleagues a	nd co-workers in the	health care.
Learning outcomes (general and specific	 General outcomes: To understand the most common internal diseases, the principles of recognition and treatment, and the emergencies in internal medicine. To describe the most common pulmonary, neurological and infectious diseases. Specific outcomes: To apply the practical skills and knowledge on the algorithms of the procedures and examinations that are warranted for the integration of a differential diagnosis, as well as for the treatment of the patients. To explain and analyze the emergency conditions, their treatment and the approach to patients. To understand the importance of an active participation in disease prevention and health preservation. To apply the knowledge in patient counseling about the drug effects and correct routes of administration. 				
(Syllabus):	The course consists of 100 hours of instructions that are divided into exercises and seminars, which take place at the Department of Internal Diseases, the Department of Infectious Diseases, the Department of Neurology and the Department of Pulmonology. In addition to practical work, which is accompanied by assistants and professors, daily seminars on the most common internal diseases are held.				
Format of instruction	Lectures		rcises practice)	Seminars	Independent assignments

(mark in bold):	Consultations	Work with	Field work	Other
		mentor		
Student responsibilities:	Students are required to attend classes, it is allowed to justifiably be absent from 20% of classes.			
Screening student work	Class attendance	Class participations	Seminar essay	Practical training
(mark in bold):	Oral exam	Written exam	Continuous assessment	Essay
Detailed evaluation within a European system of points				

STUDENTS RESPONSIBILITIES	HOURS	PROPORTIONS OF ECTS CREDITS	PROPORTIONS OF MARK
Class attendance and participations	20	0.7	0%
Practical training and work with supervision	80	2.7	0%
Seminar essay	10	0.3	50%
Written exam	40	1.3	50%
TOTAL:	150	5	100%

Further clarification: Evaluation is descriptive (pass/fail)

The exam consists of two parts: seminar work and written exam. Condition that should be fulfilled in order to take the exam is a certificate of regular attendance (exercises and seminars), 20% of absence is allowed. Students must submit a seminar in a written form and give an oral presentation during the course. The Written exam consists of five described topics addressed at seminars. The result of the exam is recorded descriptively (as passed or failed).

Required literature:	1. Jameson JL et al. Harrison's Priciples of Internal Medicine. 20th Edition, McGraw-	
	Hill professional, 2018.	
	2. Southwick F. Infectious diseases: a clinical short course. 4 thedition, McGraw-Hill 2020.	
	3. Simon RP, Aminoff MJ, Greenberg DA. Clinical Neurology. 10th Edition. New York: Lange Medical Books/McGraw Hill, 2018.course. 4th edition, McGraw-Hill 2020.	
Optional literature:	4. Lecture handouts	
Additional	Methods of monitoring the quality of teaching:	
information about the	- Student questionnaire	
course:	- Analysis of the quality of teaching by students and teachers	
	- Analysis of exam results	
	- Report of the Quality assurance office	
	- Self-evaluation and external evaluation (visit of the team from Quality assurance office)	

Annexes: calendar classes

The number of teaching unit	TOPICS AND LITERATURE		
	Title: Intestinal infections		
7	Short description: Familiarization with the etiology of a wide range of intestinal infections,		
I.	clinical picture, differential diagnosis, tests and treatment.		
	Literature: required and optional		
	Title: Systemic lupus erythematosus (SLE)		
II.	Short description: Familiarization with a possible etiology of SLE, differential diagnosis,		
	criteria for diagnosing SLE, treatment.		
	Literature: required		
	Title: Diabetes mellitus with acute and chronic complications		
	Short description: Familiarization with types of diabetes, recognizing acute complications of		
III.	diabetes, preventing chronic complications. Treatment of diabetes mellitus with emphasis on		
	patient education.		

Title: Thyroid diseases Short description: Etiology of thyroid disease, clinical picture of various thyroid gland diseases, differential diagnosis, reatment. Diseases of thyroid gland in pregnancy. Literature: required Title: Acute renal insufficiency Short description: Causes of acute renal insufficiency, the tests that need to be made in differentiating the causes of acute renal insufficiency. Treatment of acute renal insufficiency, basis of hemodialysis. Literature: required Title: Chronic renal insufficiency Short description: The causes of chronic renal insufficiency, clinical stages of CRI, approach and treatment of patients at each stage of renal insufficiency. The basic principles of dialysis (hemodialysis, peritoneal dialysis). Kidney transplantation. Literature: required Title: Gastrointestinal bleeding Short description: Causes of gastrointestinal bleeding, differentiation of bleeding sites, diagnostic tests, approach to the patient with gastrointestinal bleeding and treatment. Literature: required Title: Pancreatitis Short description: The most common causes of acute and chronic pancreatitis, clinical criteria for diagnosis and severity of the disease, diagnostic methods, approach to treating patients with acute and chronic pancreatitis. Literature: required Title: Liver cirrhosis and complications Short description: Enost common causes of liver cirrhosis, its complications as well as treatment of complications. Literature: required Title: Cardiac insufficiency Short description: Etiology of cardiac insufficiency, early recognition of disease, clinical picture, diagnostic examinations and treatment. Literature: required Title: Acute coronary syndrome Short description: Differential diagnosis of chest pain, guidelines for diagnosis of acute coronary syndrome and treatment of acute coronary syndrome. Title: Pulmonary embolism Short description: Differential diagnosis of chest pain, guidelines for diagnosis, and urgent recognition and treatment of a pulmonary embolism. Literatu		Literature: required
Not description: Etiology of thyroid disease, clinical picture of various thyroid gland diseases, differential diagnosis, treatment. Diseases of thyroid gland in pregnancy. I therature: required Title: Acute renal insufficiency Short description: Causes of acute renal insufficiency, the tests that need to be made in differentiating the causes of acute renal insufficiency. Treatment of acute renal insufficiency, basics of hemodialysis. Literature: required Title: Chronic renal insufficiency Short description: The causes of chronic renal insufficiency, clinical stages of CRI, approach and treatment of patients at each stage of renal insufficiency. The basic principles of dialysis (hemodialysis, peritoneal dialysis). Kidney transplantation. Literature: required Title: Carstointestinal bleeding Short description: Causes of gastrointestinal bleeding, differentiation of bleeding sites, diagnostic tests, approach to the patient with gastrointestinal bleeding and treatment. Literature: required Title: Pancreatitis Short description: The most common causes of acute and chronic pancreatitis, clinical criteria for diagnosis and severity of the disease, diagnostic methods, approach to treating patients with acute and chronic pancreatitis.
