### Method of calculating the final grade

Students have to pass the written exam (in form of a test, comprised of 60 questions, each containing 5 statements: 4 false and 1 true). The threshold for the written exam is 33 points. Number of total bonus points awarded during seminars and practical exam will be added to the written exam score if a student passes the threshold for the written exam of 33 points. Bonus points are valid only for the first exam term. According to the Rulebook on Studying final grade is obtained as follows:

- A = 91-100% 5
- B = 79 to 90% 4
- C = 67 to 78% 3
- D = 55 to 66% 2
- F = 0 to 54% 1

Additional co	urse information		•	•	•	•			•	-	-

Students' obligations:

Students have to attend all course lectures, seminars and exercises. Up to 20% of justified absence from seminars and lectures can be tolerated. Students are expected to participate actively during the course.

Types of seminars:

First type is described in the course curriculum by a name of the topic to be covered. The names in the curriculum correspond to the chapter titles in the literature. Seminars are interactive. The teacher explains the topic at hand and can pose questions to the students in order to assess their current knowledge. Students are expected to prepare the content of corresponding seminars in advance.

Second type of seminar is a recapitulation seminar. The goal of this type of seminar is to address the most common issues regarding the topics covered during few previous lectures and seminars. The student's positive response at recapitulation seminar will be awarded with a bonus point. Only one bonus point per seminar can be obtained by one student. Number of possible bonus points at seminars is 6.

Types of exercises:

Introduction exercise term includes explanation of mathematical functions and statistical methods required to analyze data collected during cyclic exercises.

First exercise type - cyclic exercises (C1-C6) include six different laboratory exercises. Students are expected to prepare the content of corresponding exercise in advance. The teaching material will be posted on the students' platform (SUMARUM). At the beginning of exercises the teacher will check whether the students are ready to perform the exercise through a short conversation. During exercise the students will make measurements. They are supposed to analyze data at home and present their reports during next exercise term. The teacher will review the results and make comments if mistakes were made during collecting data or calculation. If student does not bring or present unsatisfactory report he/she will be obligated to repeat that exercise during additional exercise term that will be organized at the end of classes. Student can repeat exercise only once. If a student doesn't appear for any of exercises he/she will have to take an additional exercise term. All students who miss one exercise term will be obliged to take it.

Second exercise type will be organized in the hospital. The goal is to familiarize students with the physical methods and instrumentation used in the hospital in order to obtain detailed diagnostic information and achieve useful therapeutic effects After completing all the exercises, students are obligated to take practical exam related to the exercises. Students will be awarded with a bonus point during practical exam. Number of minimal bonus points that student should obtain during practical exam in order to qualify to take written exam is 2. Maximal number of bonus points that student can achieve during practical exam is 5.

Attending all exercises is mandatory. Students are strongly advised to participate actively during the course. Practical exam will be related to exercises during course.

#### Exam:

Students have to pass the written exam (in form of a test, comprised of 60 questions, each containing 5 statements: 4 false and 1 true). The threshold for the written exam is 33 points. Number of total bonus points awarded during seminars and practical exam will be added to the written exam score if a student passes the threshold for the written exam of 33 points. Bonus points are valid only for the first exam term.

for the course enrolment	Mostar.	
emonnent	Week / shift	Торіс
Course content	Lectures	What is the medicine? Study of medicine, division of medicine and the
		role of the doctor
		The main health problems in FBiH (in terms of organization of health
		care and health insurance)
		The clinical requiring of basic resuscitation procedures and sensitivity of
		brain cells to stop circulation (hypoxia)
		Recognizing obstruction of upper airway and corrective actions
		Latin
		Access to health care in pediatrics. The most common health problems
		in pediatrics.
		Acute poisoning and first aid (identification and elimination of toxins
		from the body, antidotal and symptomatic therapy the most common
		poisoning, poisoning plants)
		Medical Sociology, Health behavior: positive promotion and illness.
		Medical Sociology: Theory of stress and social support. The main forms
		of social anomie. Career patients
		Historical development of nursing. Definitions and theories of health
		care. Basic human needs and their relation to health care. The nurse as
		a person, professional, ethical and moral issues. Basicskills assessment
		the patient's condition.
		Basic revival procedures and subsequent resuscitation methods
		Recognition of cardiac arrest on the monitor and ECG difference
		The historical turning point medicine. Basics of scientific medicine.
		Looking back in history of medicine. Birth of modern medicine.
		Introduction to medical care
	Seminars	What is the health (WHO definition), how to preserve it and improve it
		Social-economic development and health
		Hypoxia and consequences
		Obstruction of upper airway - first aid
		Word formation - morphology of medical terms
		Combining forms: body parts and tissues
		Cardiopulmonary resuscitation of the newborn.
		Acute poisoning and first aid
		Theoretical approaches to the relationship doctor-patient.
		The task of the medical profession in the past and today. The way to a
		medical profession
		Prevention of infection, the conditions essential for the development of
		infection
		The difference between the percentage of oxygen that patient gets
		from exhaled mixture of the air of rescuers and the application of
		mechanical ventilation
		ECG normal curve and ventricular fibrillation, total atrioventricular
		block and electromechanical dissociation
		Psychological Medicine and its importance in the everyday activities of
		doctors
		Health care education
		What is the disease, how to prevent it and treat its effects
	Exercises	Basic resuscitation procedures
		Obstruction of upper airway - first aid
		Terms pertaining to the body as a whole:
		1. structural organization of the body;
		2. body cavities;
		3. abdominopelvic quadrants and regions;
		4. anatomical division of the back;

		5. positional and directional terms;				
		6. planes of the body				
		The procedure with a child in convulsions				
		Acute poisoning and first aid				
		Mastering basic skills of nurturing patients, patients personal hygiene				
		and hygiene of its environment, care for comfort				
		ECG				
		Psychological Medicine				
Language	English					
E-learning	Classes are conducted live. If n	ecessary, lectures and seminars can be held combined (live and online) or

		In total			120	)	4			100%
				Method of c	alculating the fi	nal grade				

The exam is written.

All those who have not missed classes have the right to take the tests. Also, the tests can be taken by those who passed the teaching units during which they were not in class or in which they did not demonstrate sufficient knowledge. At the end of the class in a pre-exam term and all subsequent terms the test will include material from introduction to medicine, medical sociology, first aid, health care and history of medicine in the form of an integrated test and a special exam in Latin.

According to the Rulebook on Studying final grade is obtained as follows:

A = 91-100% 5

B = 79 to 90% 4

C = 67 to 78% 3

D = 55 to 66% 2

F = 0 to 54% 1

									s, where the t work in a te				

and the creation of own research (50% of the lesson) where each student must work in a team (small group) on a unique research problem under the supervision of the head of the exercises and the head of the course. Teaching is organized through six teaching units: 1. Scientific way of thinking 2. Scientific research 3. Scientific information 4. Scientific work 5. Science in preclinical and clinical medicine 6. Students' scientific work.

**Student work and activity** in class are continuously evaluated during classes, mainly in seminars and exercises that are organized through the active work of students under the supervision of teachers who direct, supervise and help them in the implementation of scientific research, which ends with the submission of a written scientific paper and an oral and poster presentation. Classical delivery of classes (ex-chair) is minimized in this course and is based on the principles of the Bologna process, which is working in small groups with the active involvement of the student who is at the center of the teaching as a dynamic and not a passive participant. Students are also taught the basics of communication skills in science, especially in public speaking and how scientific research is presented.

According to the Rulebook on studying at the University of Mostar, the final grade is assigned as follows:

0-54%, insufficient (1);

55-66%, sufficient (2);

67-78%, good (3); 7

9-90%, very good (4);

91-100%, excellent (5).

**The written test** consists of 30 written questions of the multiple-choice type with one correct answer. The minimum for passing is 17 points or 55% of correctly solved questions.

**The oral presentation** includes the presentation of scientific research works according to the principle applicable for presentations at the congresses. Each student group presents their scientific research results with a PowerPoint presentation and answers the questions of fellow students and teachers with a final poster presentation (40% of the final grade).

**The final grade** is calculated as the total sum of points achieved during active attendance at classes (10% of the final grade), writing of the scientific paper and oral/poster presentation (40% of the final), and the results of the written test (50% of the final grade).

Course objectives	The aim of this course is to familiarize students with basic principles of ethics, medical ethics and medical deontology, as well as to enable them to identify moral dilemmas in medicine, and provid means of dealing with them. Additionally, students will familiarize themselves with specifics of res and publications ethics, as well as procedures for ethics assessment of research proposals, and understand the development of human and patients' rights movements.

Course content	L2		ecular structure and			hemical bonds	
	L4         Water as the solvent. The distribution of the substance in solut           Electrolytes. The acids and base. Buffers.						
	L6	Colli	gative properties. The ems. Precipitation react	osmotically acti	-	-	
	L8	The	rmodynamics and therm rgy. Enthalpy. Entropy. (	nochemistry. Ther			
	L10		rgy of biological systems		of biochemical s	systems	
			BY OF DIOIOBICAL SYSTELLS	. Energy balance		y stems.	

	L12	Chemical equilibrium. The influence of concentration, temperature and
		pressure on the chemical balance. The equilibrium constant and Gibbs
		energy.
	L14	Chemical kinetics. The speed of reaction. Order and molecularity reaction.
		Factors affecting the rate of reaction. Enzymes. Complex reactions.
	L16	Electrochemistry. Electrode potential and electrochemical cells.
	L10	
		Gibbs energy of redox reactions. The biological redox systems.
	L18	Introduction to Organic Chemistry. Classification of organic compounds. The functional groups.
	L19	Alkanes and cycloalkanes. Stereochemistry.
	L20	Alkenes and alkynes.
	L20	Aromatic compounds.
	L22	The alkyl halides. Nucleophilic substitution at saturated carbon. Elimination
		reactions.
	L23	Alcohols, ethers, thiols, sulfides. Classification and physical properties of
		alcohol. Biologically important alcohols and phenols.
	L24	Oxidation and reduction of carbonyl compounds.
	L25	Aldehydes and ketones. Nucleophilic addition reaction.
	L26	Carboxylic acid and derivatives. Physical Properties. The acidity of the
		carboxylic acid. The carboxylic acid derivatives. Nucleophilic acyl substitution.
	L28	Carbohydrates. Nucleosides, nucleotides and nucleic acids. Classification.
		Fisher's formula. Epimers. Redox reactions of monosaccharides. Straight-
		chain and cyclic forms. Anomeric carbon atom. Mutarotation. Haworth
		formula. Glycosides. Reducing and non-reducing sugars. Disaccharides.
		Polysaccharides. Nucleosides, nucleotides and nucleic acids.
	L30	Amino acids and proteins. Relative configuration. Zwitterion. Peptide bond.
		Primary, secondary and tertiary protein structure. Enzymes. Lipids. Physico-
		chemical properties of lipids.
	S3	Calculation problems in chemistry -solutions.
	S6	a pH of acids, bases and salts
	S9	pH of buffers
	S11	Colligative properties
	S14	Thermodynamics and thermochemistry
	S15	Electrochemistry.
	S17	Nomenclature. Isomerism.
	S18	Stereochemistry. Chirality. Stereoisomers: enantiomers and diastereomers.
		Fisher projection formula. CIP system nomenclature.
	S19	Substitution, elimination, oxidation, reduction.
	S20	Addition at carbonyl carbon.
	S21	Acyl substitution.
	S22	Bioorganic compounds.
	V1	Laboratory equipment and basic laboratory techniques.
	V2	Preparation of the solutions.
	V3	Optical methods
	V4	Colloids
	V5	Osmotic resistance of erythrocytes
	V6	Buffers; The buffer capacity; The influence of the addition of a strong acid /
		base
		to buffer pH value
	V7	Volummetry: Acid-base titration
	V8	Classification tests of functional groups
	V9	Synthesis of aspirin

Additional cou	irse information								·	·		

The anatomy course contains 215 hours and is taken over 12 weeks. This includes the time for preparing partial exams, and the first exam term.

The anatomy exam consists of three parts: written, practical and oral.

Two partial written exams will be held during classes.

**The first partial exam** consists of 50 test-questions and the **second partial exam** consists of 100 multiple-choice testquestions. Each correct question brings one point.

Also, during the class, there will be a **continuous knowledge check**, students will take quizzes every day. Quizzes are not graded (only pass / fail is recorded), and depending on the success, the student can get up to three additional points on each partial exam, which are added together with the correct answers.

Based on the total number of points (correct answers from the partial exam + additional points), partial exams are graded as follows:

The written exam is graded as follows:

less than 60% correct answers = insufficient (1)

from 60% to 70% = sufficient (2)

from 71% to 80% = good (3)

from 81% to 90% = very good (4)

from 91% to 100% = excellent (5)

Once passed, the partial exam is valid for the entire academic year and that part of the material will not have to be taken again in writing.

After passing the written part, a practical exam follows.

At the practical exam, 25 anatomical structures on the preparations will be marked. All types of preparations can be considered - human plasticized, plastic models as well as donor bodies. To pass the practical part, the student must correctly name and write at least 18 marked structures.

Less than 18 points = insufficient 1

18-19 points = sufficient 2

20-21 points = good 3

22-23 points = very good 4

24-25 points = excellent 5

Once passed, the practical exam is valid for the entire academic year.

After passing the practical exam, the oral part follows.

At the oral exam, the student draws 7 cards with questions that are divided into the same number of categories. The student should orally demonstrate basic knowledge from all parts of the material he has extracted in order for his answer to be considered satisfactory.

The final grade is calculated based on the weight. The written exam carries 50% of the grade, the practical exam carries 20% of the grade, and the oral exam carries 30% of the grade.

During the exam deadlines, students who have not passed some of the partial exams must first pass the written part of the exam that did not pass on the partial exams. After passing the complete written exam, the student takes the practical exam, and after passing the practical exam, he takes the oral part of the exam.
